Search Notes

Examiner Helmer,

Here are the results for your recent search request.

Please feel free to contact me if you have any questions about these results.

Thank you for using STIC services. We appreciate the opportunity to serve you.

Sincerely,

Mary Jane Ruhl Technical Information Specialist STIC CM-1, Rm. 6-A-06 605-1155

       the PHA gene.

None of the 3 possible reading frames allow the translation of its message into a complete PHA polypeptide. The PHA translational start codon (pos. 708-710) starts a RF which codes for a truncated 50AA polypeptide with a N-terminal sequence completely identical to the dlec1 gene product, but is out of register after 10 codons due to a single bp deletion (pos. 739/740).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Two tandem polyadenylation signals are present at positions 1294-1299 and 1299-1304. Direct and inverted repeats in the form of alternating pyrimidine and purine residues are located at positions 10-29 and 74-93, and an two inverted repeats were found at positions 923-930 and 949-956.

Draft entry and sequence [1] in computer-readable form were kindly provided by L.M. Hoffman (07-0CT-1985).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2 (bases 1 to 1395)

Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77031, USA
On May 13, 2003 this sequence version replaced gi:24819049.
On May 13, 2003 this sequence version replaced gi:24819049.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Bach contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold') within each contig-scaffold, assembly (a 'contig-scaffold') within each contig-scaffold, assembly (a 'contig-scaffold') within each contig-scaffold by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens (human)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                   NOTE: This record contains 68 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allow overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is undered.
                                                                                                                                                                                                                                                                                                the record
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Web site: http://www-seq.wi.mit.edu

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeiey Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and haron Mammoser in Pieter de Jong's laboratory in the Department of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Similarity

Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a wRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AL104915

Partially Hind III digested and size-selected S. mansoni cercarial
DNA was ligated into Hind III digested pBeloBAC II vector and used
to transform E. coli DH10B. The complete library contains 23808
clones from 4 independent sizing-ligation-transformations. Average
insert size ranges from 70-127 kb and genome coverage is 7.9-fold.
